

AFTER CARE INSTRUCTIONS

1. When tattooing, a wound exists. If you treat your tattoo properly, the wound takes about six weeks to heal.
2. When we're finished tattooing, we cover the tattoo with clingfilm.
3. Treat your tattoo according to these steps:
 - remove clingfilm after 3 to 5 hours
 - wash the tattoo with mild unscented soap
 - dry the tattoo by dabbing with a clean towel
 - lubricate the tattoo with a cream that the shop advises
 - repeat 2 times a day
4. Make sure that during the healing process, you:
 - touch the tattoo as little as possible (wash your hands before taking care of the wound)
 - don't scratch the tattoo
 - don't cover the tattoo with tight or dirty clothes
 - don't cover the tattoo with band-aids or bandages
 - avoid (bubble)baths, swimming pools, saunas and steam baths
 - don't expose the tattoo to the sun or UV-light of tanning bed
5. We advise to always put (high factor) sunscreen on the tattoo, even after healing.
6. **Attention:** contact a doctor if redness, swelling, bleeding, exudation, colour changing or chronic pain occur.
